Number and Place Value		Knowledge Organiser		
Numbers to Ten Million				
<h2>3 926 471</h2>				
Millions	Hundred Thousands	Ten Thousands	Thousands	Hundreds
3	9	2	6	4
				Tens
				7
				Ones
				1
<p>three million, nine hundred and twenty-six thousand, four hundred and seventy-one</p>				
Round Any Number				
Rounding to the nearest 1000		Rounding to the nearest 100 000		
2000 ← 2499 → 2500 → 3000	round down	2500 → 3000	round up	200 000 ← 249 999 → 250 000 → 300 000
				round down
Rounding to the nearest 10 000		Rounding to the nearest 1 000 000		
20 000 ← 24 999 → 25 000 → 30 000	round down	2 000 000 ← 2 499 999 → 2 500 000 → 3 000 000	round down	2 500 000 → 3 000 000
			round up	round up

Practise reading, writing and building big numbers. Use commas correctly between the thousands and hundreds and millions and hundreds of thousands columns to make the numbers easier to read.

Practise partitioning and recombining numbers using part part whole models and place value number sentences.

Count Forwards and Backwards through 0

Tm	M	Hth	Tth	Th	H	T	O	t	h	th
Ten Millions	Millions	Hundred Thousands	Ten Thousands	Thousands	Hundreds	Tens	Ones	Tenths	Hundredths	Thousandths
10 000 000	1 000 000	100 000	10 000	1000	100	10	1	0.1 $\frac{1}{10}$	0.01 $\frac{1}{100}$	0.001 $\frac{1}{1000}$

Negative Numbers

Positive Numbers

Rounding to 10

Rounding to the nearest 10

Remember: The **red** digit is the one to consider.

Rounding to 100

Rounding to the nearest 100

Remember: The **red** digit is the one to consider.

Rounding to 1000

Rounding to the nearest 1000

Remember: The **red** digit is the one to consider.

Rounding to 10 000

Rounding to the nearest 10 000

Remember: The **red** digit is the one to consider.

Rounding to 100 000

Rounding to the nearest 100 000

Remember: The **red** digit is the one to consider.

Block 2– Four Operations -Multiplication and Division

Four Operations

Knowledge Organiser

Short Division

Start from the left.

		4	4	0	5	$5 \div 12 = 0 \text{ r}5$
12	5	2	8	6	0	$52 \div 12 = 4 \text{ r}4$
						$48 \div 12 = 4$
						$6 \div 12 = 0 \text{ r}6$

Common Factors

Factors of 48

1	2	3	4	6	8	12	16	24	48
---	---	---	---	---	---	----	----	----	----

Factors of 30

1	2	3	5	6	10	15	30
---	---	---	---	---	----	----	----

Common factors: 1, 2, 3, 6

Common Multiples

Multiples of 3

3	...	18	21	24	...	39	42
---	-----	----	----	----	-----	----	----

Multiples of 7

7	14	21	28	35	42
---	----	----	----	----	----

Common multiples: 21, 42...

Long Division

		1	2	0	r	3
14	1	6	8	3		
	1	4	0	0		
		2	8	3		
		2	8	0		
				3		

Primes

A prime number has only 1 and itself as factors: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43

A composite number has factors other than 1 and itself.

Squares and Cubes

Square numbers result from a number being multiplied by itself (e.g. $5 \times 5 = 25$):

1, 4, 9, 16, 25, 36, 49, 64, 81, 100

Cube numbers result from a number being multiplied by itself twice ($2 \times 2 \times 2 = 8$):

1, 8, 27, 64, 125

Mental Calculations and Estimation

Order of calculations:

$$50 \times 34 \times 2 = 50 \times 2 \times 34 = 100 \times 34 = 3400$$

Money: $\pounds 8.99 + \pounds 3.49 = \pounds 12.48$

Use $\pounds 9 + \pounds 3.50 = \pounds 12.50$ and subtract 2p

Estimate on a number line

Subdivide line to estimate: 17

Reason from Known Facts

$$90 \div 10 = 9 \quad \text{so } 90 \div 20 = 4.5 \text{ and } 90 \div 5 = 18$$

$$16 \times 9 = 144 \quad \text{so } 1.6 \times 9 = 14.4$$

$$4352 \div 17 = 256$$

$$\text{so } 256 \times 18 = 4352 + 256 = 4608$$

$$3786 + 2850 = 6636$$

$$\text{so } 4786 + 2850 = 7636$$

$$\text{and } 2786 + 3850 = 6636$$

$$\text{and } 8636 - 3786 = 4850$$

Vocabulary and home learning

Learn divisibility rules off by heart.

Learn prime numbers up to 100 by heart.

Practise finding factors and multiples including common factors and multiples of numbers up to 100.

Weblink including activities

- [Factors, multiples and primes - KS2 Maths - BBC Bitesize](#)

DIVISIBILITY RULES

2 if the last number is even

3 if the sum of the digits is divisible by 3

4 if the last 2 digits is a number divisible by 4

5 if the last number is a 0 or a 5

6 if the number is divisible by 2 and 3

7 if you double the last digit, subtract it from the rest of the number and that number is divisible by 7

8 if the last 3 digits are divisible by 8

9 if the sum of the digits is 9 or divisible by 9

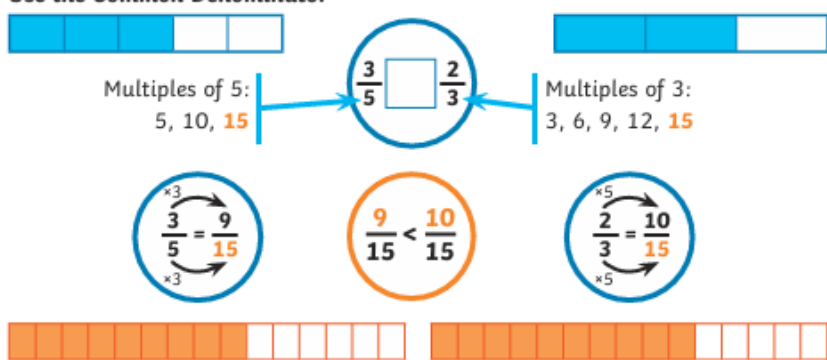

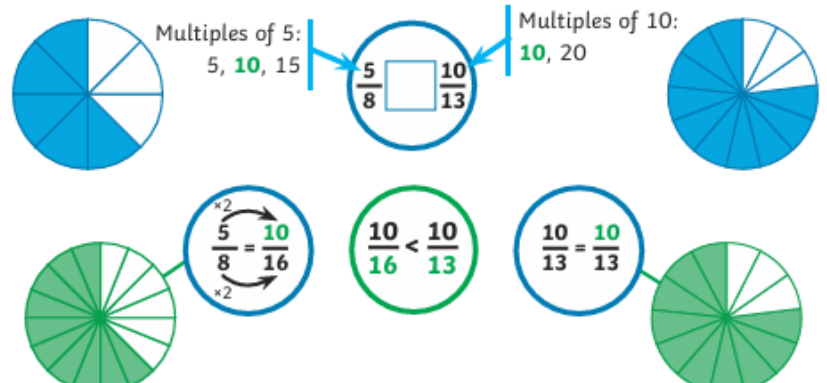

10 if the number ends with a 0

11 if you take the alternating sum of the digits in the number, read from left to right. If that is divisible by 11, so is the original number.

12 if the number is divisible by 3 and 4

A NUMBER IS DIVISIBLE IF IT CAN BE DIVIDED EVENLY WITH NO REMAINDER

Block 3– Fractions A

Fractions		Knowledge Organiser

Converting Units
Knowledge Organiser

Miles to Kilometres

You might measure the length of a road or the distance between two cities in miles or kilometres.

= means approximately equal to

Time

Minute 1 minute = 60 seconds

Hour 1 hour = 60 minutes

Day 1 day = 24 hours

Week 1 week = 7 days

Year 1 year = 12 months = 52 weeks = 365 days

Imperial Measures

Things that could be measured using imperial units:

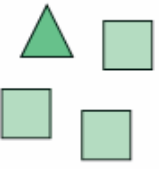

- Someone's height in feet and inches
- The mass of a bag of sugar in ounces
- The mass of a sack of potatoes in pounds
- A person's mass in stones
- A carton of milk in pints
- The amount of water in a bath in gallons

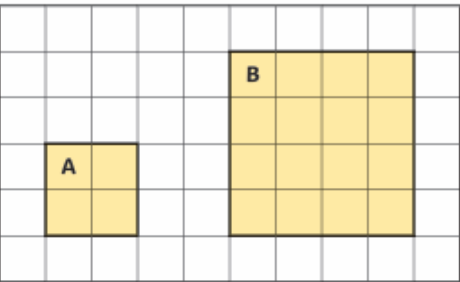

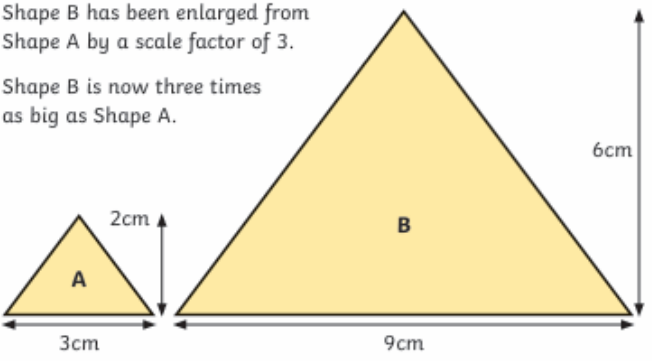

1 foot = 12 inches
 1 pound = 16 ounces
 1 stone = 14 pounds
 1 gallon = 8 pints

Metric to Imperial Conversions

metric (new)	imperial (old)
2.5 centimetres	1 inch
1 kilogram	2.2 pounds
4.5 litres	1 gallon

Spring Block 1—Ratio [Ratio - KS2 Maths - BBC Bitesize](#)

Ratio		Knowledge Organiser
Key Vocabulary	Ratio Language	The Ratio Symbol
ratio	For every 1 circle, there are 2 triangles. 	
proportion		The ratio of footballs to rugby balls: 1:4 The ratio of rugby balls to footballs: 4:1
"for every... there are..."	For every 2 bananas, there are 3 apples. 	
part		
whole	For every 1 football, there are 3 rugby balls. 	
scale factor		The ratio of circles to triangles: 2:3 The ratio of triangles to circles: 3:2
enlargement	Ratio and Fractions	
similar shapes		For every 1 rugby ball, there are 2 footballs. Ratio of rugby balls to footballs: 1:2 $\frac{1}{3}$ of the balls are rugby balls.
length		
width		
perimeter		For every 1 triangle, there are 3 squares. Ratio of triangles to squares: 1:3 $\frac{1}{4}$ of the shapes are triangles.

Ratio		Knowledge Organiser
Ratio and Proportion Problem-Solving	Scale Factors	
<p>To use the ingredients for 1 person, you divide all the quantities by 10 ($\div 10$).</p> <p>Ingredients for Fruit Smoothie (serves 10 people)</p> <ul style="list-style-type: none"> 800g of bananas 500g of strawberries 200g of raspberries 700ml of milk 300ml of natural yogurt <p>To use the ingredients for 5 people, you halve all the quantities ($\div 2$).</p> <p>To use the ingredients for 20 people, you double all the quantities ($\times 2$).</p>	 <p>Shape A has been enlarged by a scale factor of 2 to make Shape B. Shape B is now two times as big as Shape A.</p>	
<p>In a bag of 15 sweets, there is 1 smiley face sweet for every 4 love heart sweets.</p> <p>Therefore, there will be 3 smiley face sweets and 12 love heart sweets in the bag.</p>	 <p>Shape B has been enlarged from Shape A by a scale factor of 3. Shape B is now three times as big as Shape A.</p>	
 visit twinkl.com		

Algebra	Knowledge Organiser	
Key Vocabulary	Linear Number Sequences	
term to term rule	A linear number sequence is a sequence where each value increases or decreases by the same amount each time. Each number in a linear number sequence is called a term . The constant change between each number is called the term to term rule . To identify the term to term rule , find the difference between two adjacent terms.	
variable	When you know the term to term rule, you can use it to find the next number in the sequence. It can also be used to find a missing number within a sequence.	
unknown		
expression		
equation	Forming Expressions	Forming Equations
formula	<p style="text-align: center;">Add 14 to a</p> <p style="text-align: center;">Subtract 20 from b</p> <p style="text-align: center;">Multiply c by 4</p> <p style="text-align: center;">12 more than d</p> <p style="text-align: center;">Multiply e by 3 and subtract 5</p> <p style="text-align: center;">Add 12 to f and then multiply by 2</p>	<p style="text-align: center;">$a + 14 = 20$</p> <p style="text-align: center;">$b - 20 = 15$</p> <p style="text-align: center;">$4c = 28$</p> <p style="text-align: center;">$d + 12 = 30$</p> <p style="text-align: center;">$3e - 5 = 10$</p> <p style="text-align: center;">$2(f + 12) = 44$</p>
one-step equation	An expression is a group of numbers, letters and operation symbols.	
two-step equation	An equation is a number statement with an equal sign (=). Expressions on either side of the equal sign are of equal value.	
substitution	Formulas / Formulae	
pairs of unknowns	(The word formula has two possible plural forms, formulae and formulas.)	
enumerate	A formula is a special type of equation that shows the relationship between different substituted variables. Formulas are often used in geometry to find area and volume.

Solving One-Step and Two-Step Equations	
<p>In algebra, missing numbers in equations are represented by letters. Any letter can be used but often the letter x is used. An algebraic x is written to look different to a normal letter 'x' to avoid confusion.</p> <p>$3x = 15$</p>	<p>The multiplication sign is not used in algebra to avoid confusing it with the algebraic x used to show a missing number. Inverse operations are used to isolate the letter on one side of the equation.</p> <p>$2x + 4 = 10$</p>

Spring Block 4 Fractions, Decimals, Percentages ctd

Percentages
Knowledge Organiser

Finding a Percentage of an Amount

$50\% = \frac{1}{2}$ so we can divide by 2

100

$10\% = \frac{1}{10}$ so we can divide by 10

20

$25\% = \frac{1}{4}$ so we can divide by 4

50

$1\% = \frac{1}{100}$ so we can divide by 100

2

Percentages – Missing Values

Whole value (100%) of bar model = ?

150

10% = 15

We know 10% = 15 10% × 10 = 100% (the whole) so 15 × 10 = 150

Home learning

Spring Block 5 Area, Perimeter and Volume

Key Vocabulary
perimeter
area
volume
cubic units (e.g. cm^3)
cuboid
width
length
rectangle
rectilinear
parallelogram
perpendicular height

Area of Rectangles

$\text{length} \times \text{width} = \text{area of a rectangle}$

Counting squares:
 area = 18cm^2
 Use formula:
 $6\text{cm} \times 3\text{cm}$
 area = 18cm^2

$8\text{cm} \times 4\text{cm} \text{ area} = 32\text{cm}^2$

Perimeter of Rectangles

$\text{perimeter} = \text{length} + \text{width} + \text{length} + \text{width}$
 or $(\text{length} + \text{width}) \times 2$

$5\text{cm} + 4\text{cm} + 5\text{cm} + 4\text{cm}$
 area = 18cm^2

$(6 + 2) \times 2$
 area = 16cm^2

Area of Triangles

$\text{base} \times \text{perpendicular height} \div 2 = \text{area of a triangle}$

$8\text{cm} \times 3\text{cm} \div 2$
 area = 12cm^2

perpendicular height = 5cm

$6\text{cm} \times 5\text{cm} \div 2$
 area = 15cm^2

Counting squares:
 6 whole squares = 6cm^2
 6 half squares = 3cm^2
 $6\text{cm}^2 + 3\text{cm}^2 = 9\text{cm}^2$
 area = 9cm^2

Using formula:
 $6\text{cm} \times 3\text{cm} \div 2 = 9\text{cm}^2$

Perimeter and Area

Shapes with the same area can have different perimeters.

area = 8cm^2 perimeter = 12cm

area = 8cm^2 perimeter = 18cm

Shapes with the same perimeter can have different areas.

area = 8cm^2 perimeter = 12cm

area = 5cm^2 perimeter = 12cm

Volume - Counting Cubes

Area of Parallelograms

$\text{base} \times \text{perpendicular height} = \text{area of a parallelogram}$

A parallelogram can be transformed into a rectangle.

perpendicular height = 6cm

$12\text{cm} \times 6\text{cm} = 72\text{cm}^2$

Volume of Cuboids

$\text{length} \times \text{width} \times \text{height} = \text{volume of a cuboid}$

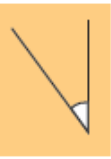

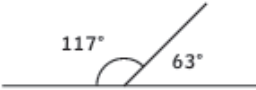

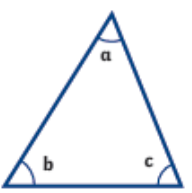

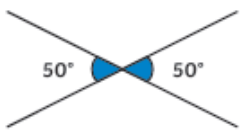

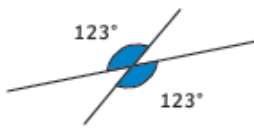

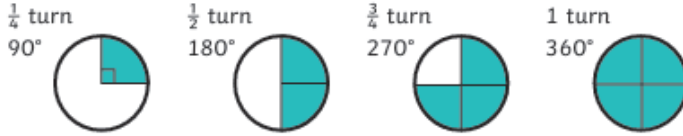

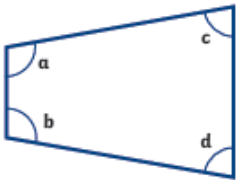

Multiply dimensions in **any** order:
 $3\text{cm} \times 6\text{cm} \times 4\text{cm}$
 volume = 72cm^3

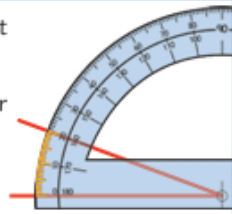

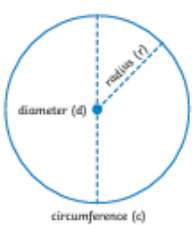

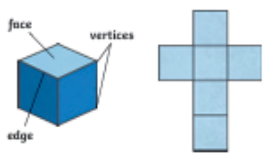

Spring Block 6 Statistics

Statistics		Knowledge Organiser
Key Vocabulary	Interpreting Data	Pie Charts
bar chart	Information can be show in tables, charts or graphs.	Pie charts represent discrete data.
pictogram	Interpreting data simply means understanding or working out what is being shown by a table, graph or chart and being able to answer questions about that information.	A circle is divided into segments, where each segment represents a data category. The size of each segment matches its proportion of the total amount.
frequency table		
tally chart		
pie chart	Line Graph	A pie chart to show children's favourite sports
discrete data	Line graphs are used to show changes to a measurement over time.	<p>Key</p> <ul style="list-style-type: none"> swimming netball football gymnastics
continuous data	Data shown in a line graph is continuous. Sets of points are joined together to make the line.	
line graph		24 children were asked in total.
sum		Swimming = $\frac{1}{2}$ so $\frac{1}{2}$ of 24 = 12 children
difference		Netball = $\frac{1}{4}$ so $\frac{1}{4}$ of 24 = 6 children
comparison		Football = $\frac{1}{8}$ so $\frac{1}{8}$ of 24 = 3 children
interpret		Gymnastics = $\frac{1}{8}$ so $\frac{1}{8}$ of 24 = 3 children
mean average		
	<p>A line graph to show the length of shadows over time</p> <p>Legend: April (purple), May (orange)</p>	

Statistics		Knowledge Organiser																							
Bar Chart	Pictogram	Class 10's Pets																							
A bar chart has a horizontal axis and a vertical axis. Bars show the data value of each category. There must be a gap between each bar. The scale of the bar chart is chosen based on the data range.	This graph uses pictures or symbols to represent the data. The pictogram uses one picture or symbol to represent a value.	<p>□ = 4 Children</p>																							
<p>A Bar Chart to Show the Temperature at Lunchtimes</p>																									
Frequency Table	Mean Average																								
<table border="1"> <thead> <tr> <th>Eye Colour</th> <th>Tally</th> <th>Frequency</th> </tr> </thead> <tbody> <tr> <td>brown</td> <td>### </td> <td>6</td> </tr> <tr> <td>blue</td> <td>### </td> <td>8</td> </tr> <tr> <td>green</td> <td> </td> <td>3</td> </tr> <tr> <td>grey</td> <td> </td> <td>4</td> </tr> <tr> <td>hazel</td> <td>###</td> <td>5</td> </tr> </tbody> </table> <p>Tally marks are used to help count things. Each vertical line represents one unit. The fifth tally mark goes down across the first four to make it easier to count.</p> <p>The frequency column is completed after all the data has been collected.</p>	Eye Colour	Tally	Frequency	brown	###	6	blue	###	8	green		3	grey		4	hazel	###	5	<p>The mean is the average of a set of data.</p> <p>To find the mean or average, add up all of the values to find the total. Divide the total by the number of values that you added together. This will give you the mean.</p> <table border="1"> <tr> <td>12</td> <td>15</td> <td>10</td> <td>8</td> <td>15</td> </tr> </table> <p>$12 + 15 + 10 + 8 + 15 = 60$</p> <p>$60 \div 5 = 12$</p> <p>The mean of this data is 12.</p>	12	15	10	8	15

Summer Block 1 Shape

Properties of Shapes		Knowledge Organiser		
Key Vocabulary angle right angle acute obtuse reflex protractor horizontal vertical parallel perpendicular polygon regular irregular two-dimensional three-dimensional flat face curved surface edge curved edge vertex vertices apex radius diameter circumference	Angle Types			
		Acute Angles Any angle that measures less than 90° is called an acute angle.		Obtuse Angles Any angle that measures greater than 90° and less than 180° is called an obtuse angle.
				Reflex Angles Any angle that measures greater than 180° is called a reflex angle.
	Calculating Angles		Angles in a Triangle	
		Angles on a straight line always total 180°.		Angles around a point always total 360°.
		$a + b + c = 180^\circ$		
				Angles in a Quadrilateral
		Opposite angles that share a vertex are equal.		
		Multiples of 90° can be used as descriptions of a turn.		
			 $a + b + c + d = 360^\circ$	

Properties of Shapes		Knowledge Organiser	
Using a Protractor		Angles in Regular Polygons	
Place the cross or circle at the point of the angle you are measuring. Read from the zero on the outer scale of your protractor. Count the degree lines carefully.		As the number of sides of a polygon increases by one, the total of the interior angles increases by 180°. When n = number of sides, this formula can be used to find the size of each angle in a regular polygon :	
Parts of Circles		$\text{Sum of Interior Angles} = (n - 2) \times 180^\circ$	$\text{Each Angle} = \frac{(n - 2) \times 180^\circ}{n}$
A circle is a 2D shape. The perimeter of a circle is called the circumference (c). The distance across the circle, passing through the centre, is called the diameter (d). The distance from the centre of the circle to the circumference is called the radius (r).		 Pentagon $n = 5$ $(5 - 2) \times 180^\circ = 540^\circ$ $540^\circ \div 5 = 108^\circ$	 Hexagon $n = 6$ $(6 - 2) \times 180^\circ = 720^\circ$ $720^\circ \div 6 = 120^\circ$
Nets of 3D Shapes		Properties of 3D Shapes	
	A shape net shows which 2D shapes can be folded and joined to make a 3D shape. When you are drawing a net, or solving a problem involving a shape net, think carefully about where the edges of the faces meet.	3D shapes have three dimensions – length , width and depth . A polyhedron is a 3D shape with flat faces. Spheres, cylinders and cones are not polyhedrons as they have curved surfaces.	
	6 square faces 12 edges 8 vertices		4 triangular faces 6 edges 4 vertices
	6 faces 12 edges 8 vertices		8 faces 12 edges 6 vertices
	5 faces 8 edges 5 vertices		1 circular face 1 curved surface 1 curved edge 1 apex
			1 curved surface 0 edges 0 vertices
			5 faces 9 edges 6 vertices
			2 circular faces 1 curved surface 2 curved edges 0 vertices

Summer Block 2 Position and Direction

Key Vocabulary	
translate	
translation	
reflect	
reflection	
up	
down	
right	
left	
coordinates	
quadrant	
x-axis	
y-axis	
horizontal	
vertical	

Four Quadrants

Coordinates can use positive and negative numbers. Whether positive or negative, the x-axis coordinate is written first, followed by the y-axis coordinate.

Look at the circle. It is 3 units along the x-axis and 4 down the y-axis. Its coordinates are (3,-4).

Completing Shapes

Using the properties of a shape, a polygon can be completed on a grid.

To make a square, think of the square's properties.

All of a square's sides are the same length. If the completed sides are 2 units in length, the missing point must complete two more sides of 2 units.

To make a right-angled triangle, think of the triangle's properties.

A right-angled triangle should have three sides with one 90° angle.

Translation

A shape is translated when it is moved without being rotated or resized. Every point of the shape moves the same distance and in the same direction.

Shape 1 has been translated 4 units left and 3 units down.

Reflections

A shape is reflected when it is flipped over a line which acts as a mirror. Every point on the original shape is the same distance from the mirror line as the same point on the reflected shape. The original triangle has been reflected in the x-axis and in the y-axis.

Missing Coordinates

Shapes can be shown on unmarked grids.

Point a is in the same position along the x-axis as (5,2) and in the same position on the y-axis as (7,9).

Point a (5,9)

Point b is in the same position on the y-axis as (10,4). Both triangles will have the same width. The width of the right-hand triangle is 3. This means that the width of the left-hand triangle is also 3.

Point b (2,4)
