

Bishop Loveday C.E. Primary School

Calculation Policy

September, 2016

Introduction:

The fast recall of mathematical facts does not guarantee strong, capable, flexible mathematicians. Thinking interchangeably about number means that children can, when needed, apply a range of strategies when conducting any kind of calculation. *'Low achievers are often low achievers not because they know less, but because they don't use numbers flexibly – they have been set on the wrong path, often from an early age, of trying to memorise methods...'* (Boaler, 2015).

The National Curriculum for England (2014) makes clear that children:

- should become **fluent** in the fundamentals of mathematics – not the memorisation of facts, but the ability to work with numbers in a variety of ways, to complete calculations

e.g. Bridging through 10 ($9 + 6 = 9 + 1 + 5 = 10 + 5 = 15$) and

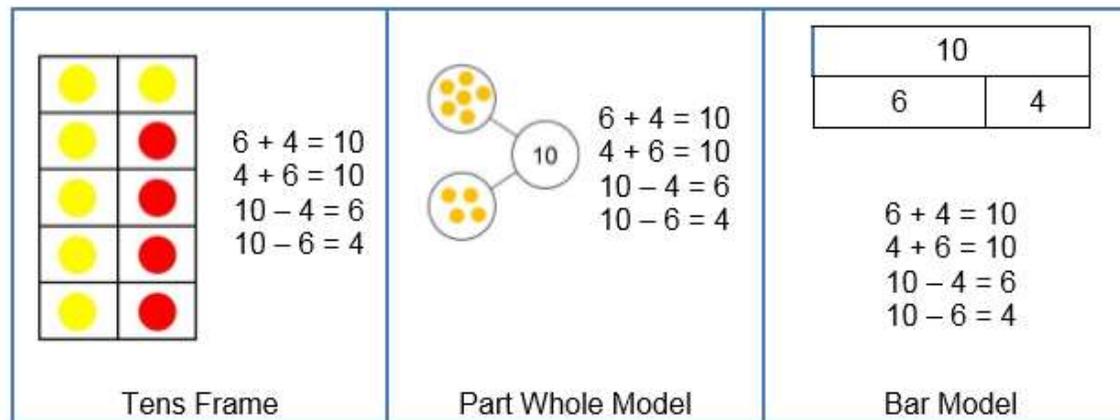

Place Value using Base Ten apparatus

- can **reason** mathematically - looking for patterns and connections to justify their thinking

e.g. What's the same and what's different about the 3 Times Table and the 6 Times Table?

-can **solve problems** by applying their mathematics to a variety of problems with increasing sophistication, including unfamiliar contexts and how the rules of arithmetic can be applied.

Maths is all about patterns and 'pattern sniffing' (finding the pattern). A sound way in which to ascertain children's understanding is to have them express their thinking in multiple ways using multiple resources and images (Grey & Tall, 1994; Ofsted, 2011), in ways that they determine to be useful.

Three different representations of $6 + 4$

Given the National Curriculum requirement that, by the age of 9, children can recall their Times Tables, it is tempting for teachers to succumb to the routine drilling of children, through timed tests and repeated methods. A classroom, however, that is rich in resources that are: readily available; modelled by teachers; and self-selected by children will support children to believe that maths is accessible, relatable and, hopefully, interesting!

Children's fluency and conceptual understanding will be strengthened if they experience concrete, visual and abstract representations of a concept during a lesson. Moving between the concrete and the abstract helps children to ultimately make abstract connections with familiar objects.

Concrete Using actual resources	Pictorial Using images	Abstract Imagining and expressing
Cubes Counting sticks Counters* Cuisenaire rods Dienes (Base Ten apparatus) Place value counters Beads Numicon Ten frames (number bonds) Hundred squares Place value grids	Number lines (filled and blank) Bar models Pictures/ images Place value grids	

* Counters can be turned into place value counters by keep separating by colour and using a whiteboard pen to denote the value (i.e. TH, H, T, O)		
---	--	--

Why have a calculation policy?

By adopting a calculation policy, we ensure that children learn maths in ways that enable them to reason about concepts and make connections. Using the CPA approach, we ensure that children are not learning through mechanical repetition, but have opportunities to consistently practise their skills through multiple representations.

Acknowledgements

Many thanks to the White Rose Maths Hub for the use of its resources when developing this policy.

EYU to Year 1

There are fundamental skills that are important for children to develop, as these form the foundation for the later application of arithmetic.

A selection of the skills include:

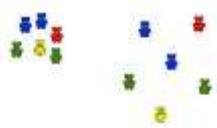

- **Ordinality** – the ordering of numbers in relation to one another – e.g. (1, 2, 3, 4, 5...)

- **Cardinality** – the counting words are matched to the quantity of items

- **Equality** – ‘7 is the same total as 4 add 3’ – e.g.

Subitising – instantly recognising the number of objects in a small group, without counting them – e.g.  → 5

- **Conservation of number** – recognising that a value of objects are the same, even if they are laid out differently – e.g. 

- **One-to-one correspondence** – e.g.

- **Counting on and back from any number** – e.g. ‘Five add three more totals eight’

‘Ten take away three is seven’

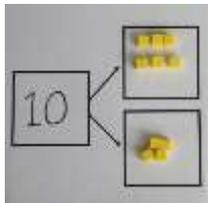

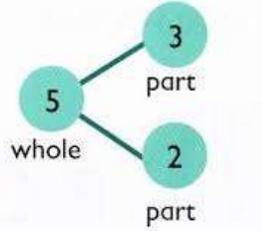

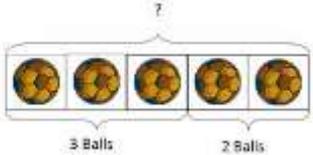

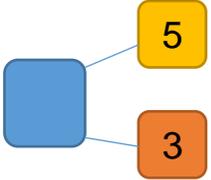

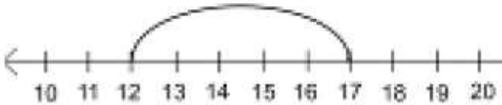

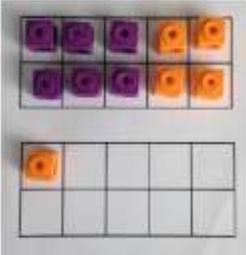

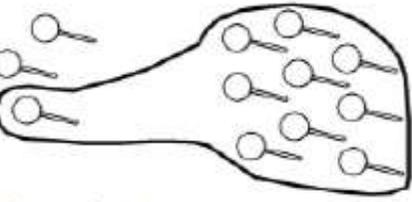

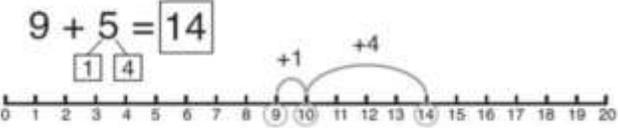

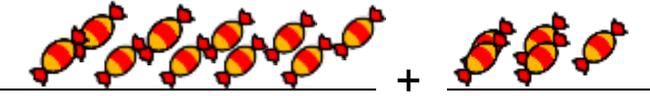

- **Using apparatus and objects** to represent and communicate thinking – e.g.

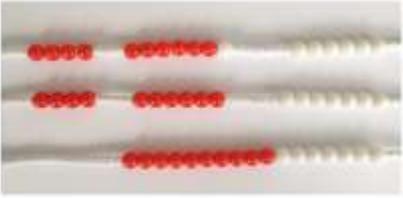

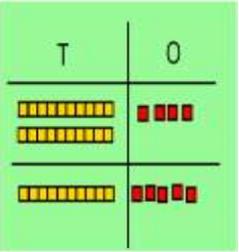

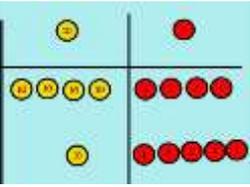

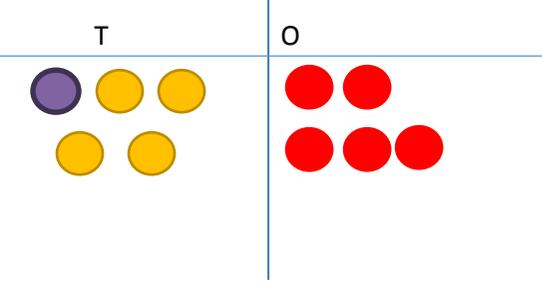

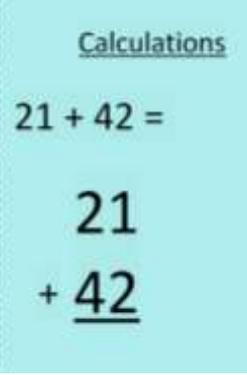

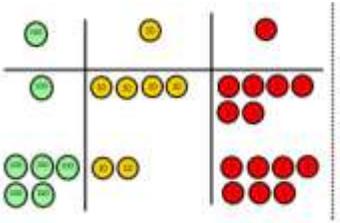

- **Maths language** – using mathematical words verbally in every-day situations – e.g. ‘climb up to the top’ / ‘climb down to the bottom’

Adding multiples of 10

Useful resources
Base Ten
Empty number lines
Bar models
Money
Counters
Counting sticks

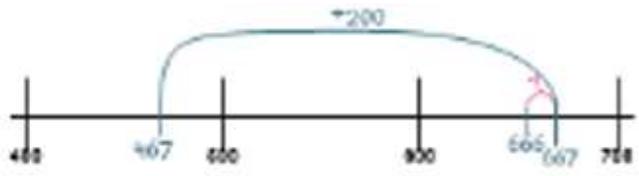

50 = 30 + 20

3 tens + 5 tens = _____ tens
30 + 50 = _____

Use number sentences to support thinking.

Use vocabulary such as 1 Ten, 2 Tens etc, alongside 10, 20 etc.

36 + 40 =

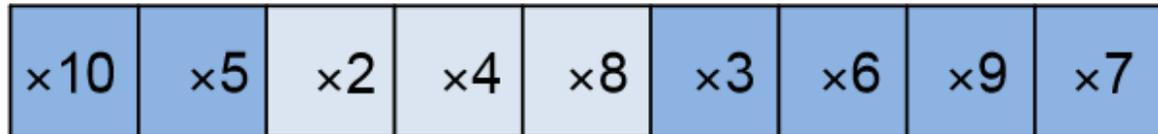

Notes about

Support children to use known facts

	3 + 4 = 7
<i>leads to</i>	
	30 + 40 = 70
<i>leads to</i>	
	300 + 400 = 700

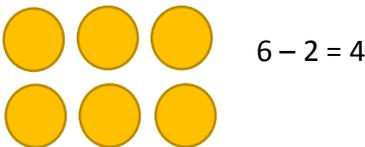

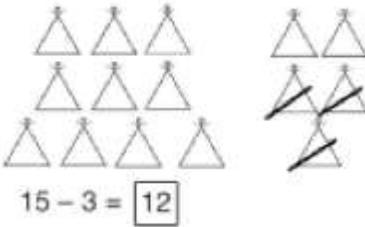

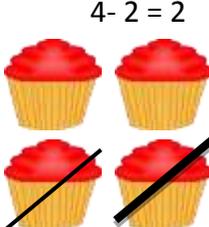

multiplication:

Times Tables are easier to learn in this sequence:

Due to the commutative nature of multiplication, once children know a set of facts, there are only 21 to learn (Times Tables, the 21 facts).

SUBTRACTION:

Objective and Strategies	Concrete	Pictorial	Abstract
<p>Taking away ones</p> <p><u>Useful resources</u> Bead strings Multi-link Counters Straws Counting sticks Number lines Images</p>	<p>Use physical objects, counters, cubes etc. to show how objects can be taken away.</p> 	<p>Cross out drawn objects to show what has been taken away.</p> 	<p>$18 - 3 = 15$</p> <p>$8 - 2 = 6$</p> <p>$4 - 2 = 2$</p> 

Counting back

Useful resources

- Beads
- Counters
- Base Ten
- Counting stick
- Number lines (blank and filled)

Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones.

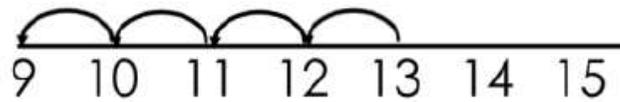

13 - 4

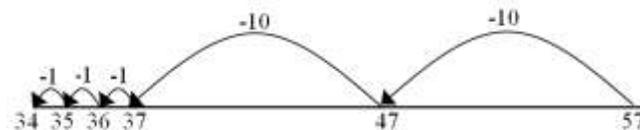

Use counters and move them away from the group as you take them away counting backwards as you go.

Count back on a number line or number track

Start at the bigger number and count back the smaller number showing the jumps on the number line. (Number lines also work well for lessons on Time)

This can progress all the way to counting back using two 2 digit numbers.

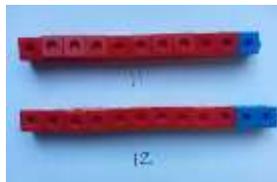

Put 13 in your head, count back 4. What number are you at? Use your fingers to help.

Finding the difference

Useful resources

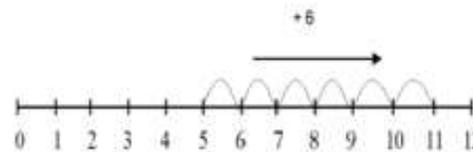

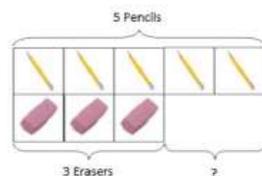

- Bead strings
- Multi-link
- Counters
- Straws
- Numicon
- Hundred squares
- Bar models

Compare amounts and objects to find the difference.

Use cubes to build towers or make bars to find the difference

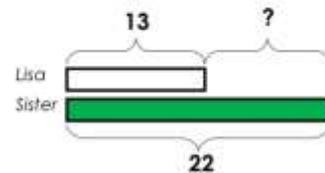

Use basic bar models with items to find the difference

Count on to find the difference.

Comparison Bar Models

Lisa is 13 years old. Her sister is 22 years old. Find the difference in age between them.

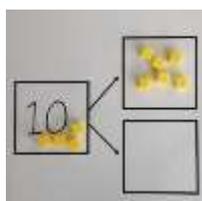

Draw bars to find the difference between 2 numbers.

Hannah has 23 sandwiches, Helen has 15. Find the difference between the number of sandwiches.

Part-part-whole model

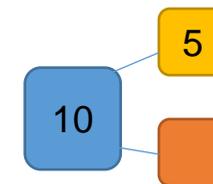

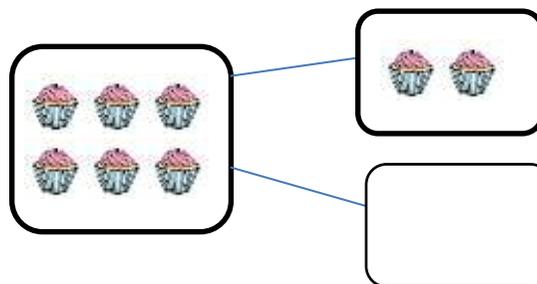

Useful resources
Part-part whole images
Counters
Cherry tree
Multi-link
Images
Bar model

If 10 is the whole and 6 is one of the parts. What is the other part?
 $10 - 6 =$

Link to addition - use the part-part-whole model to help explain the inverse between addition and subtraction.

Use a pictorial representation of objects to show the part-part whole model.

Move to using numbers within the part whole model.

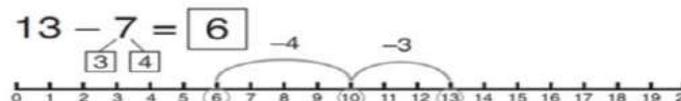

'Make 10' strategy

Useful resources
Ten frames
Multi-link
Counters
Number lines

$14 - 9 =$

Make 14 on the ten frame. Take away the 4 first to make 10 and then take away one more so you have taken away 5. You are left with the answer of 9.

Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer.

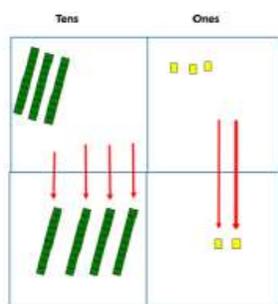

$16 - 8 =$

How many do we take off to reach the next 10?

How many do we have left to take off?

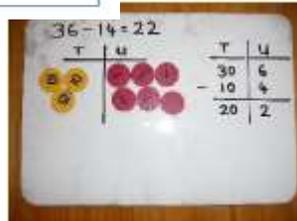

Column method without regrouping (without creating groups of 10s)

Useful resources
Base Ten
Counters
Place value grids

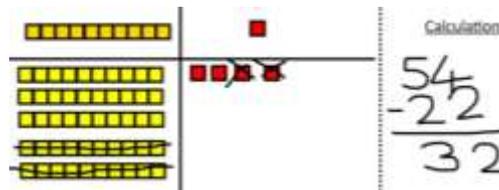

Use Base Ten to make the bigger number, then take the smaller number

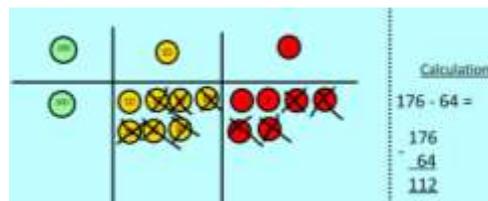

away.

Show how you partition

Draw the Base Ten or counters alongside the written calculation to help show working.

$47 - 24 = 23$
 $\begin{array}{r} 40 + 7 \\ - 20 + 4 \\ \hline 20 + 3 \end{array}$

This will lead to a clear

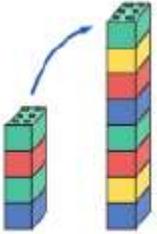

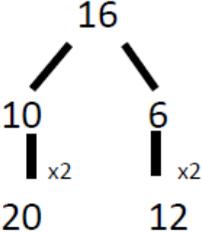

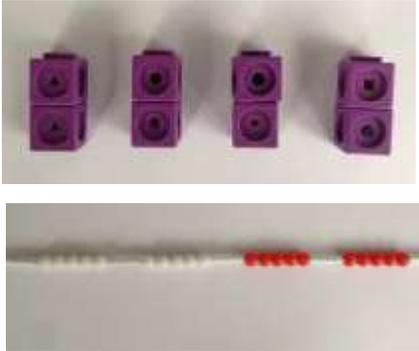

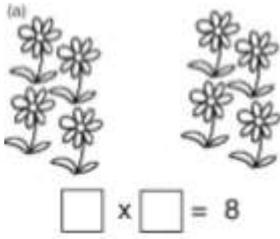

$\begin{array}{r} 32 \\ - 12 \\ \hline 20 \end{array}$

written column subtraction

	<p>numbers to subtract. Again, make the larger number first.</p>		<p>action.</p>

Build tables on counting stick

Repeated addition

Useful resources

- Multi-link
- Counters
- Numicon
- Straws
- Number lines
- Images
- Counting sticks

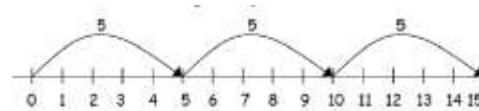

Use different objects to add equal groups.

There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there?

2 add 2 add 2 equals 6

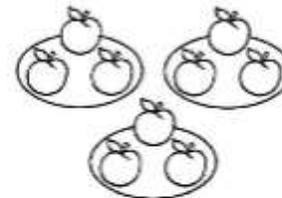

$$5 + 5 + 5 = 15$$

Write addition sentences, to describe objects and pictures.

$$2 + 2 + 2 + 2 + 2 = 10$$

How many apples are there altogether?

$$3 + 3 + 3 = 9$$

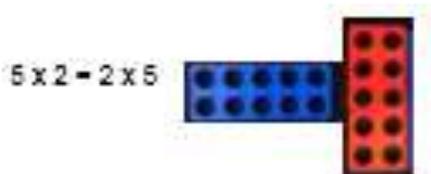

Commutative multiplication, using arrays

Commutative = works either way (like a commuter)

Useful resources

- Multi-link
- Counters
- Numicon
- Straws
- Images
- Cuisenaire rods

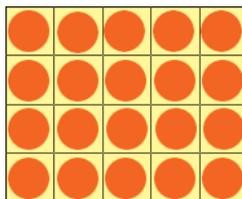

Create arrays using counters/ cubes to show multiplication sentences.

Draw arrays in different rotations to find **commutative** multiplication sentences.

Link arrays to area of rectangles.

Use an array to write multiplication sentences and reinforce repeated addition.

$$5 + 5 + 5 = 15$$

$$3 + 3 + 3 + 3 + 3 = 15$$

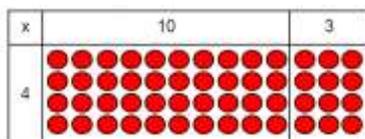

$$5 \times 3 = 15$$

$$3 \times 5 = 15$$

Grid Method

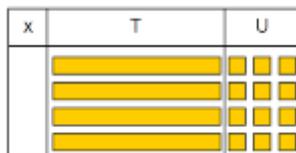

**The grid method is a progressive stage in formal multiplication. The National Curriculum (2014) does not recognise it as a written method, so it should be used to aid understanding before moving on to a formally recognised more efficient model.*

Show the link with arrays to first introduce the grid method.

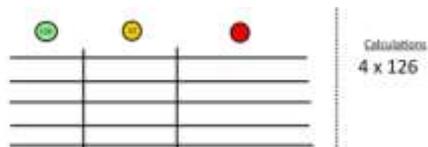

4 rows of 10
4 rows of 3

Move on to using Base Ten to move towards a more compact method.

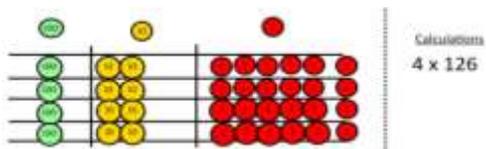

4 rows of 13

Move on to place value counters to show how we are finding groups of a number. We are multiplying by 4 so we need 4 rows.

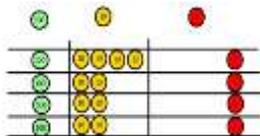

Calculations
 4×126

Fill each row with 126.

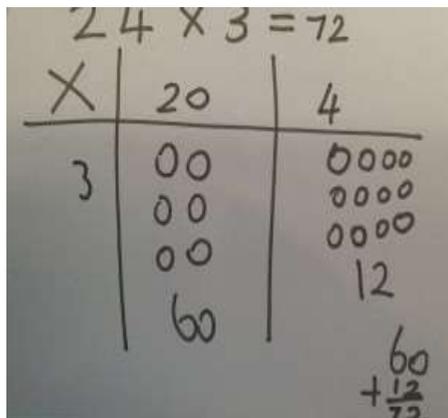

Calculations
 4×126

Add up each column, starting with the ones making any exchanges needed.

Children can represent the work they have done with place value counters in a way that they understand.

They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking.

Start with multiplying by one digit numbers and showing the clear addition alongside the grid.

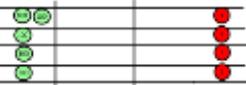

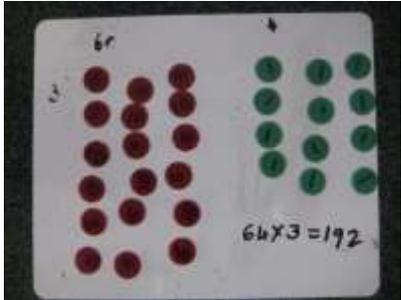

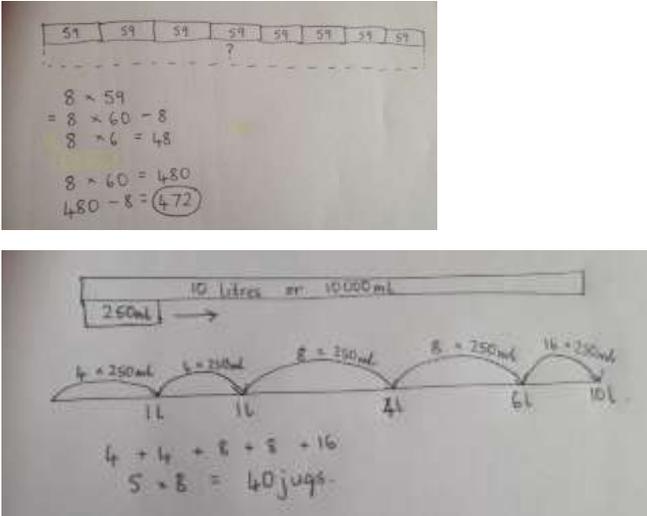

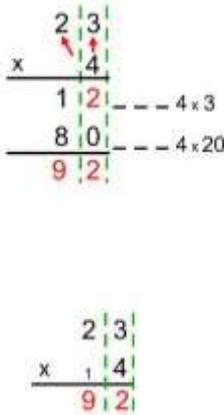

x	30	5
7	210	35

$$210 + 35 = 245$$

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

	10	8
10	100	80
3	30	24

x	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

	<p>Then you have your answer.</p> 		
<p>Column multiplication</p> <p><u>Useful resources</u> Counters Bar models Empty number lines</p>	<p>Children can continue to be supported by counters at this stage of multiplication, should they need it.</p>  <p>It is important, at this stage, that children always multiply the 1s first and note down their answer, followed by the 10s, which they note below.</p>	<p>Bar modelling and number lines can support learners when solving problems with multiplication <u>alongside the formal written methods.</u></p> 	<p>Start with long multiplication, reminding the children about lining up their numbers clearly in columns.</p> $23 \times 4 = ?$ 

Division:

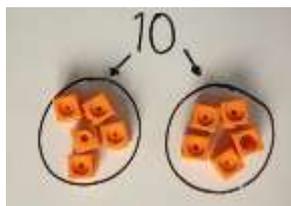

Division as sharing

Useful resources

- Counters
- Cubes
- Objects
- Images
- Bar models

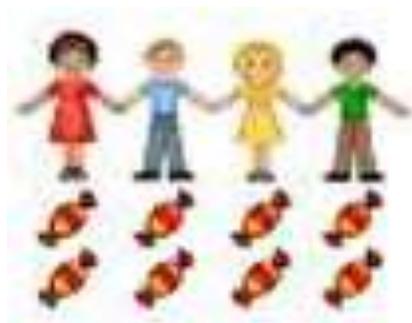

I have 10 cubes. Can you share them equally, into 2 groups?

Link division to fractions

Children use pictures or shapes to share quantities.

$16 \div 4 =$			
☺☺☺☺☺	☺☺☺☺☺	☺☺☺☺☺	☺☺☺☺☺
☺	☺	☺	☺

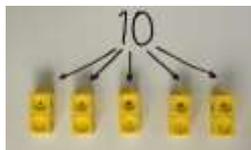

Share 9 buns between three people.

$$9 \div 3 = 3$$

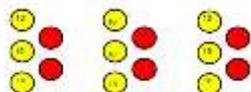

Division as grouping

Useful resources

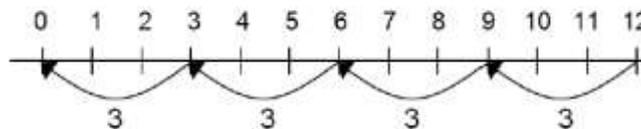

- Cubes
- Counters
- Objects
- Beads
- Number lines
- Bar models

$$96 \div 3 = 32$$

Use a number line to show jumps in groups. The number of jumps equals the number of groups.

20				

?				

$20 \div 5 = ?$
 $5 \times ? = 20$

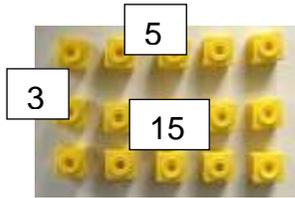

$$28 \div 7 = 4$$

Divide 28 into 7 groups. How many are in each group?

Division using arrays

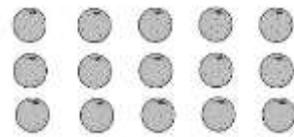

Useful resources

Cubes
Objects
Images

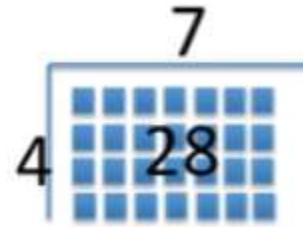

Link division to multiplication by creating an array and thinking about the number sentences that can be created.

e.g. $15 \div 3 = 5$ $5 \times 3 = 15$
 $15 \div 5 = 3$ $3 \times 5 = 15$

Draw an array and use lines to split the array into groups to make multiplication and division sentences.

Find the inverse of multiplication and division sentences by creating four linking number sentences.

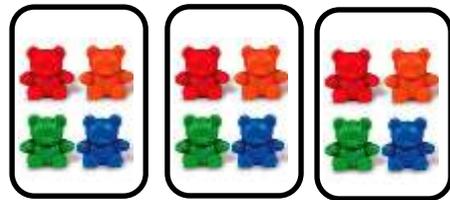

$7 \times 4 = 28$
 $4 \times 7 = 28$
 $28 \div 7 = 4$
 $28 \div 4 = 7$

Division with a remainder

Useful resources

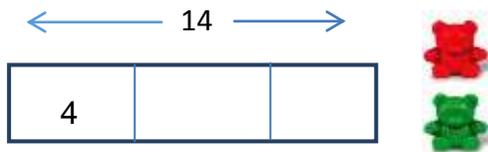

Cubes
Counters
Objects
Bar models
Number lines
Images

$14 \div 3 =$
 Divide objects between groups and see how much is left over

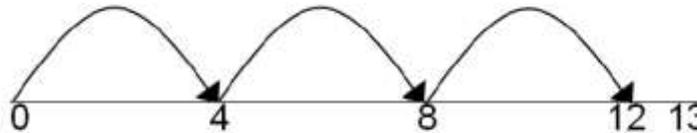

OR

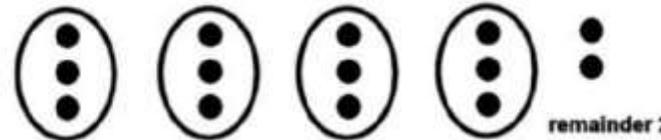

Give the answer ($14 \div 3 = 3 \text{ r}2$), showing children that you can remove the remainder and group using the bar model.

Jump forward, in equal jumps on a number line, then see how many more you need to jump to find a remainder.

Draw dots and group them to divide an amount and clearly show a remainder.

$16 \div 3 = 5 \text{ r}1$

Complete written divisions and show the remainder using 'r'.

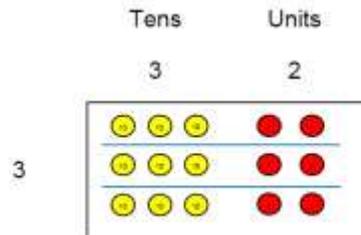

$28 \div 8 = 3 \text{ r}5$

Short division

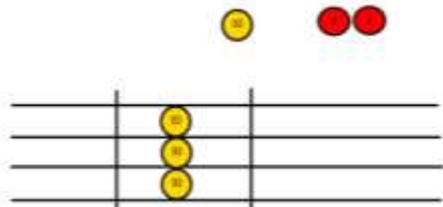

Useful resources

- Counters
- Base Ten
- Images
- Place value grids

Use counters to divide, using the bus stop method, alongside $42 \div 3 =$

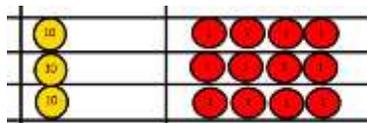

Start with the biggest place value, share 40 into three groups. Put 1 ten in each group, leaving 1 ten left over.

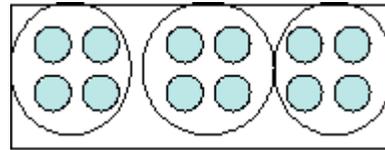

Exchange the left over ten for ten 1s and share these equally between three groups.

Look at how much is in 1 group, so the answer is 14.

Base Ten blocks can be used in the same way.

Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.

Encourage them to move towards counting in multiples to divide more efficiently.

Begin with divisions that divide equally, with no remainder.

$$\begin{array}{r} 218 \\ 3 \overline{) 654} \\ \underline{6} \\ 0 \\ \underline{0} \\ 0 \\ \underline{0} \\ 0 \end{array}$$

Move onto divisions, with a remainder.

$$\begin{array}{r} 86 \text{ r } 2 \\ 3 \overline{) 258} \\ \underline{6} \\ 0 \\ \underline{0} \\ 0 \\ \underline{0} \\ 0 \end{array}$$

Finally, move into decimal places to divide the total accurately.

$$\begin{array}{r} 14.6 \\ 35 \overline{) 511.0} \\ \underline{35} \\ 16 \\ \underline{15} \\ 11 \\ \underline{10} \\ 10 \\ \underline{10} \\ 0 \end{array}$$

Important concepts for teaching (in alphabetical order)

Conjecture	Similar to a guess – something that requires proof
Decimal point	Decimal point is fixed, it's the digits that move
Ones	Rather than Units, as documented in the National Curriculum, 2014
Negative '6'	Use 'negative' rather than minus, to avoid confusion with other calculations
Prime number	A prime number has only two factors
Sum	Use solely for addition
Total	The sum found by adding
